## **Abstracts**

The global antimicrobial wound cleanser market size was estimated at USD 575.26 million in 2025 and is projected to reach USD 852.24 million by 2033, growing at a CAGR of 4.47% from 2026 to 2033. The market growth is driven by the rising prevalence of chronic wounds such as diabetic foot ulcers and pressure injuries, which require ongoing infection control.

Increasing surgical procedures and trauma cases are also boosting demand for effective wound cleansing solutions. Growing awareness of infection prevention and the reduction of hospital-acquired infections further supports market growth. In addition, the shift toward outpatient and home-based wound care is expanding the use of convenient antimicrobial formulations.

The growing prevalence of chronic wounds such as diabetic foot ulcers and pressure injuries increases the risk of infection, driving demand for antimicrobial wound therapy. These wounds require long-term management and repeated cleansing, leading to higher product utilization. As diabetes and aging populations rise, the need for effective antimicrobial treatment continues to expand.
