Anti-Static Agents Market Size & Trends

The global anti-static agents market size was estimated at USD 577.5 million in 2023 and is projected to grow at a CAGR of 7.2% from 2024 to 2030. The growth of the market can be attributed to the product reducing the charges on the surface of polymers and increasing the conductivity of the products. In the semiconductor industry, the demand for anti-static agent packaging is expected to rise due to strict requirements for component protection and the high sensitivity of semiconductor devices to electrostatic discharges (ESDs). Robust packaging solutions are crucial to prevent damage during transportation, manufacturing, and handling.

Antistatic agents are a specific type of plastic additive engineered to mitigate the accumulation of static electricity on plastic surfaces. Their application is widespread due to the potential issues associated with static electricity, such as dust attraction, product damage, and electrical discharge. Projections indicate that the product market is poised for growth in the forecast period. This anticipated expansion is linked to the increasing utilization of agents aimed at diminishing charges on polymer surfaces and enhancing product conductivity.
