Abstracts

The global automotive fuel cell market size was estimated at USD 6.89 billion in 2025 and is projected to reach USD 10.06 billion by 2033, growing at a CAGR of 4.9% from 2025 to 2033. The market growth is primarily driven by the rising demand for zero-emission mobility, increasing government support for hydrogen infrastructure, and the growing adoption of fuel cell electric vehicles (FCEVs) across passenger and commercial vehicle segments to meet stringent emission regulations.

In addition, the market is gaining momentum due to continuous advancements in fuel cell stack efficiency, durability improvements, and cost reduction in key components such as membranes, catalysts, and bipolar plates. Expanding investments in green hydrogen production, along with partnerships between automakers, energy companies, and hydrogen refueling providers, are further accelerating deployment. These factors are expected to support steady market expansion over the forecast period.
