Autonomous Data Platform Market Growth & Trends

The global autonomous data platform market size is expected to reach USD 6.73 billion by 2030 and grow at a CAGR of 23.0% from 2022 to 2030, according to the recent reports of Grand View Research, Inc. A broad array of developing open-source big data tools, the accessibility of ever-larger quantities of data, and a shift in culture inside companies toward content decision-making, make it feasible to adopt autonomous data platforms. As a result of the cloud platform's improved collaboration, accessibility, and cost-effectiveness it is anticipated to increase the demand for cloud-based autonomous data platforms. The extensive use of autonomous data platforms in real-time analytics, to offer convenient services to customers, in the BFSI and retail sectors is anticipated to drive market growth.

The global rise in automation and digitization has made businesses switch towards using technology-driven solutions to meet the rapid pace of business growth. Emerging businesses that adopt cloud-based services, mainly in developing economies such as the Asia Pacific, are expected to fuel the growth of the autonomous data platform industry over the forecast period. Further, features such as fraud detection, improved security, and increased collaboration opportunities, provided by the cloud-based solutions are expected to increase business productivity and overall growth of an
