Summary

The global battery manufacturing equipment market size was valued at USD 13,092.0 million in 2024 and is projected to reach USD 67,746.1 million by 2033, growing at a CAGR of 20.6% from 2025 to 2033. The market is primarily driven by the rapid global expansion of electric vehicle (EV) production, which requires large-scale, high-precision equipment for electrode preparation, cell assembly, and formation testing.

Automakers and cell producers are investing heavily in new gigafactories and upgrading existing lines, boosting demand for mixing, coating, calendaring, slitting, stacking, and assembly machinery capable of achieving high throughput and consistent quality. As lithium-ion batteries dominate next-generation mobility, manufacturers continue to scale their production capacity, directly stimulating equipment procurement.

Consumer electronics remains another significant driving factor, with continuous production of smartphones, laptops, wearables, and portable devices driving the need for compact cell formats and highly automated assembly processes. As manufacturers pursue higher energy density, improved safety, and faster production cycles, they increasingly adopt advanced machinery designed for precision, uniformity, and minimal

material waste.
