## **Abstracts**

The global betulinic acid market size was estimated at USD 2,505.03 million in 2024 and is projected to reach USD 4,662.8 million by 2033, growing at a CAGR of 7.3% from 2025 to 2033. The growth is propelled by several key drivers. The most significant is the increasing demand for plant-derived and natural active ingredients across multiple consumer sectors.

In pharmaceuticals, intensive research into its anti-cancer mechanisms and potential as a complementary therapy is a major driver, fueled by the global rise in cancer prevalence. The industry is a specialized and growing segment within the botanical extract and pharmaceutical industries. This pentacyclic triterpenoid is primarily sourced from the outer bark of birch trees (genus *Betula*), though it can also be found in other plants like plane trees and jujube. Its value stems from its potent and diverse biological activities, which include anti-cancer, anti-viral, anti-inflammatory, and skin-healing properties. Currently, the market is characterized by its high-value, low-volume nature, with demand stemming from pharmaceutical research, the cosmetics and personal care sector, and the nutraceutical industry, where it is used in premium dietary supplements.

Despite strong demand, the industry faces notable challenges. The high production cost associated with advanced CVD and PVD processes remains a significant barrier, particularly for smaller manufacturers and price-sensitive end markets. Uniform

deposition on diverse substrates, metals, ceramics, and composites presents technical obstacles, as inconsistent thickness and adhesion can undermine performance and customer confidence.

In addition, limited awareness among potential end-users about the full value proposition of betulinic acid dampens adoption in emerging applications and geographies. These factors restrict market penetration and slow the uptake outside traditional high-performance sectors.

The cosmetics industry's strong shift toward 'clean' and bioactive formulations is accelerating its adoption, as betulinic acid is valued for its anti-aging, anti-acne, and skin-soothing properties. Furthermore, growing health consciousness and consumer preference for natural preventive healthcare solutions are boosting its profile in the nutraceuticals market.
