### **Biocompatibility Testing Services Market Summary**

The global biocompatibility testing services market size was estimated at USD 5.1 billion in 2025 and is projected to reach USD 10.6 billion by 2033, growing at a CAGR of 9.7% from 2026 to 2033. The rising need for regulations and ISO 10993 compliance is driving demand for biocompatibility testing services, as companies must conduct biological assessments to obtain approval or make changes to their devices.

In addition, the increase in demand for biologics and combination products is expected to drive extractable and leachable testing, especially in drug container-closure system applications, thereby boosting market growth.

Increasing regulatory pressure, the growing complexity of medical devices, advancements in the use of biologics and combination products, and outsourcing services to CROs are among several key factors contributing to increased demand for ISO 10993-compliant biocompatibility testing, in turn driving the growth of the biocompatibility testing services market over the forecast period. Additionally, the product iteration and the development of materials used in medical devices further support the number of biological tests conducted on various devices.

In addition, the regulatory standards, such as those required by the U.S. FDA and the EMA, have mandated the complete safety analyses of medical devices used across

several implants and delivery systems. The growing use of advanced materials in devices for heart disorders and orthopedics is driving greater emphasis on sensitization, irritation, and systemic toxicity testing. As a result, the demand for biological testing remains steady, irrespective of new devices being introduced or existing ones being improved.
