Abstracts

The global blast freezer market size was estimated at USD 2.66 billion in 2025, and is projected to reach USD 6.43 billion by 2033, growing at a CAGR of 11.0% from 2026 to 2033. The growing demand for food safety and quality preservation in food processing and cold storage industries is anticipated to fuel the market growth.

The increasing demand for frozen and convenience foods is driving market growth. Frozen meals, ready-to-eat products, canned foods, and snacks that require minimal preparation are increasingly preferred by consumers due to busy lifestyles. Moreover, food manufacturers are placing greater focus on producing high-quality, easy-to-prepare frozen and convenience foods with extended shelf life. This trend is driving the adoption of blast freezers, as food quality, safety, and freshness are maintained while manufacturers efficiently meet the rising demand for convenient food options.

The blast freezer market is increasingly leveraging automation and digital temperature-monitoring solutions to improve freezing precision, reduce manual intervention, and enhance food safety and operational efficiency. For instance, in July 2025, Industrial, a software company, introduced ColdOS Sense, an advanced temperature monitoring solution for cold storage and frozen food facilities. The system utilizes real-time data analytics to provide continuous temperature visibility across warehouses, enabling faster issue identification and reducing reliance on manual inspections. ColdOS Sense helps operators improve compliance, optimize energy usage, and lower operational costs.

Governments and private players are focusing on large-scale cold storage and blast freezing facilities to stabilize the food supply, support farmers, and improve distribution efficiency. For instance, in January 2026, the Department of Agriculture is building a USD 9 million (PHP 500 million) cold storage facility to improve food security and support farmers in the region. The facility includes refrigerated warehouses, a blast freezer, processing and packing areas, and a solar power system to improve efficiency and reduce energy costs, allowing the store to store large quantities of meat and vegetables, helping stabilize the food supply and reduce spoilage. In addition, another USD 9 million (PHP 500 million) will be invested in a food hub to improve trading, distribution, and export opportunities for farmers and fishers
