Abstracts

The global blue carbon market size was estimated at USD 2.42 million in 2025 and is projected to reach USD 14.79 million by 2033, growing at a CAGR of 24.99% from 2026 to 2033. Market growth is primarily driven by the increasing global focus on climate change mitigation, rising adoption of nature-based carbon removal solutions, and expanding participation in voluntary carbon markets.

Blue carbon ecosystems such as mangroves, seagrasses, and salt marshes are gaining significant attention for their high carbon sequestration potential while simultaneously supporting coastal resilience, biodiversity conservation, and sustainable ecosystem management.

Growing investments from enterprises, governments, and environmental organizations in carbon offset initiatives are accelerating project development worldwide. Strengthening regulatory frameworks, corporate net-zero commitments, and improved carbon accounting methodologies are further supporting market expansion. In addition, advancements in monitoring, reporting, and verification (MRV) technologies are enhancing project credibility and attracting institutional funding. Strategic collaborations between conservation groups, project developers, and financial stakeholders continue to strengthen commercialization pathways, positioning blue carbon as a critical solution in achieving long-term global decarbonization goals.
