## Abstracts

The global brass market size was valued at USD 9.8 billion in 2025 and is projected to grow from USD 13.3 billion in 2026 to USD 18.6 billion by 2033 at a CAGR of 5.0% from 2026 to 2033. Asia Pacific dominated the market, accounting for a revenue share of 43.0% in 2025. Increasing demand for corrosion-resistant, machinable, and durable metal components across construction, automotive, electrical and electronics, and industrial manufacturing applications is expected to support growth.

It offers a combination of strength, formability, thermal and electrical conductivity, and resistance to corrosion, making it suitable for plumbing fittings, valves, connectors, precision-engineered components, and architectural hardware. The growing demand for durable, corrosion-resistant metal components across construction, automotive, electrical and electronics, and industrial manufacturing is supporting the expansion of the global brass market. Brass offers excellent machinability, formability, thermal and electrical conductivity, and corrosion resistance, making it suitable for plumbing fittings, valves, connectors, fasteners, architectural hardware, and precision-engineered components. Increasing infrastructure development, expansion of electrical networks, and rising demand for reliable metal components in residential, commercial, and industrial applications are expected to support consumption.

opportunities for brass products. Brass is used in fuel system components, radiator parts, terminals, sensors, bearings, gears, and other precision components that require dimensional stability and ease of machining. Growing vehicle production, increasing electrical content in automobiles, and the development of industrial automation systems are supporting demand for brass components. In addition, the expansion of machinery manufacturing and the need for reliable fluid-handling systems are contributing to the adoption of brass fittings, valves, and connectors across industrial applications.
