Abstracts

The global breast implants market is anticipated to reach USD 2.0 billion by 2025, according to a new report by Grand View Research, Inc. Increasing focus toward enhancement of physical appearance has led to the growth of breast implants market.

Breast reconstructions are being highly adopted by women in order to enhance their physical appearances. This kind of surgery involves esthetic repair of any damage taking place after implantation procedure. According to the American Society of Plastic Surgeons, in 2015, nearly 106,000 breast reconstruction procedures have been performed in the U.S. Thus, such huge number of cases are expected to drive the growth of the market.

Breast implants are used post mastectomy to enhance esthetic appeal. Breast augmentation is another procedure requiring the application of these implants. Esthetic appeal plays an important role in increasing the demand for these procedures, thereby, making the cosmetic industry lucrative for the target population.

Further key findings from the study suggest:

In 2016, silicone implants dominated the market due to the fact that it has a natural resemblance to the breast tissue

due to lesser risk of complications during implant rupture

Round-shaped implants held the largest market share in 2016 owing to less complications involved during implant rotation

Anatomical-shaped devices are expected to showcase lucrative growth in the future due to their design that has a natural appearance, which make them ideal for breast enhancement

The cosmetic surgery segment dominated the market in 2016 due to the growing number of cosmetic procedures conducted globally

North America dominated the market in 2016 due to rising number of augmentation procedures of this organ conducted in the U.S.
