Abstracts

The global breathable antimicrobial coatings market is expected to reach USD 676.7 million by 2024, according to a new report by Grand View Research, Inc. Growing population and high focus towards better healthcare services are expected to fuel the demand over the forecast period. In addition, supportive government regulations and increasing medical device & pharmaceutical manufacturing in developing economies are expected to augment utilization of the product over the forecast period.

Rapid development in antimicrobial technology is expected to play a key role in augmenting market development. Numerous companies namely Microban, Biocote, and Sciescent have been involved in providing effective antimicrobial technologies for numerous industries including medical, food, textiles, and construction.

The University of Dundee has been focused on developing new technologies for medical devices in order to prevent infections and its related diseases. They have developed nanocomposite coatings to reduce bacterial colonization & adhesion, thrombus formation, and prion adhesion.

They have been focusing on developing antimicrobial coatings, especially for implanted medical devices. Similarly, the University of South Australia developed new technology to reduce the risk of infection after biomedical implants such as knee or hip replacement.

Further key findings from the report suggest:

Indoor air quality dominated the market in 2015 and is expected to witness a CAGR of over 11% from 2016 to 2025 on account of rising concerns regarding pollution of indoor environment including workplaces
