Breathable Films Market Report Highlights

The global breathable films market is anticipated to reach USD 27.58 billion in 2030 with a CAGR of 5.3% from the year 2022 to 2030. The development in medical and apparel industry across the globe is boosting the Breathable films market

Non-porous is the most consumed breathable films type, with a revenue share of more than 63.0% in 2021. Its demand has increased due to the growing usage from major end use industries globally, such as medical & healthcare, building & construction, sports apparels, and various others

Packaging is the most common application for the Breathable Films materials, due to its high global demand for the manufacturing of packaged readymade beverages, sports & industrial protective apparel. It is also used to manufacture different hygiene products such as diapers, napkins, masks, and others

The market is increasing owing to growing demand for the breathable films from the medical & healthcare industry. Technological developments, transformations in plastics, and evolved decontamination devices. These are boosting demand for the breathable films

Major breathable film manufacturing companies have been increasing the capacity of their own production plants, instead of setting up new facilities, to strengthen their position in the global landscape. For instance, in January 2020, Berry Global Group, Inc. expanded its production capacity for hygiene, healthcare, and specialty film products in North America. In order to meet the expanding market demands for sustainable products and breathable film in the North American region, the company has invested in both extrusion and printing capabilities
