Abstracts

The global buccal cavity devices market size was valued at USD 3.2 billion in 2025 and is projected to grow from USD 3.3 billion in 2026 to USD 4.9 billion by 2033, at a CAGR of 5.7% from 2026 to 2033. North America dominated the market, accounting for the largest revenue share of 33.6% in 2025. The growth is driven by the rising prevalence of oral diseases, increasing demand for preventive and restorative dental care, expanding adoption of oral drug delivery devices, and growing utilization of oral diagnostic, surgical, airway management, and saliva management devices across healthcare settings.

In addition, advancements in devices such as intraoral cameras are significantly contributing to the growth of the buccal cavity devices market by improving diagnostic accuracy, patient communication, and clinical workflow efficiency. Modern intraoral cameras provide high-resolution imaging, real-time visualization, LED illumination, autofocus capabilities, and seamless integration with digital dental records and treatment planning software. These technologies enable clinicians to detect dental caries, periodontal diseases, cracks, and other oral abnormalities at earlier stages while enhancing patient understanding through chairside image display. For instance, in March 2025, ACTEON launched the C20 Full HD intraoral camera at IDS 2025 to enhance dental diagnostics and clinical workflow efficiency. The camera features Full HD imaging, AIS 5.5 software integration, and compatibility with Windows, Mac, and

TWAIN systems for seamless practice integration.
