In many countries, there are guidelines and recommendations for calcium intake, along with initiatives to address calcium deficiencies in the population. Some governments have implemented policies to encourage the fortification of staple foods with essential nutrients, including calcium. These regulatory frameworks and public health campaigns play a crucial role in boosting the demand for calcium-fortified foods, as they raise awareness and promote the consumption of these products.

The demand for dairy and dairy alternatives in the calcium-fortified food market is increasing due to growing awareness of bone health, dietary shifts towards plant-based options, technological advancements in fortification, regulatory support for nutrient enrichment, rising incidence of osteoporosis, consumer preference for functional foods, and innovations catering to diverse dietary needs.
