## Abstracts

The Canada gasoline fuel market size was estimated at USD 47.42 billion in 2024 and is projected to reach USD 47.12 billion by 2033, growing at a CAGR of 1.1% from 2025 to 2033. Market growth is primarily supported by the country's strong mobility trends, with gasoline remaining the dominant fuel for passenger vehicles across both urban and rural regions.

Despite the gradual increase in the adoption of hybrid and electric vehicles, internal combustion engine (ICE) cars and light-duty trucks continue to comprise a large share of Canada's vehicle fleet. Steady economic activity, population growth in major metropolitan areas, and continued consumer preference for SUVs and light trucks sustain gasoline demand. Additionally, ongoing improvements in retail fuel distribution networks, convenience store expansions, and competitive pricing strategies by major fuel marketers are expected to reinforce stable market performance over the forecast period.

Regionally, gasoline consumption is highest in Ontario, Quebec, Alberta, and British Columbia, driven by dense commuting networks, suburban transportation patterns, and robust commercial activity. Provincial fuel standards and federal carbon pricing policies are gradually influencing the shift toward cleaner-burning gasoline and higher biofuel blending mandates. The market is witnessing increasing availability of E10 and E15 ethanol-blended gasoline, supported by agricultural producers and biofuel refiners. Meanwhile, key companies such as Suncor Energy (Petro-Canada), Imperial Oil (Esso),

Parkland Corporation, Shell Canada, and Irving Oil continue to modernize refining operations and optimize supply chains to ensure reliable distribution across retail fueling stations. While the long-term electrification of transport will shape future fuel demand, gasoline is expected to remain a key component of Canada's energy and mobility infrastructure in the medium term, balancing regulatory pressures with the persistent need for accessible and affordable liquid transportation fuels.
