Canada Varicose Vein Treatment Devices Market Growth & Trends

The Canada varicose vein treatment devices market size is expected to reach USD 77 million by 2028, registering a CAGR of 6.6% over the forecast period, according to a new report by Grand View Research, Inc. High prevalence of varicose veins due to risk factors, such as pregnancy, sedentary lifestyle, obesity, and physical activities like standing for longer durations is expected to drive the market growth.

Hypertension is one of the main risk factors for varicose veins. In Canada, conditions like hypertension are rising, with 22% of adults having hypertension issues. Furthermore, the aging population is increasing significantly in Canada. With a rise in the geriatric population, cases of varicose veins are anticipated to increase as they are at a higher risk. Overall, 26% of adults in Canada have varicose veins as per the Canadian Society of Vascular Surgery, signifying high disease prevalence, thereby favoring the market growth.

However, the COVID-19 pandemic has negatively impacted the market as all non-urgent elective procedures, including varicose veins treatment surgeries, was postponed. Manufacturers operating in the market witnessed a decline in their revenues. The public healthcare system of Canada emphasizes more on conservative

management of varicose veins rather than surgical procedures.

Canada Varicose Vein Treatment Devices Market Report Highlights

Canada has been witnessing a surge in the number of varicose veins cases in recent years

According to the Canadian Society of Vascular Surgery, around 50% of people with varicose veins are aged 50 years and above

Overall, 3.7 million people in Canada suffer from varicose veins and women are at a higher risk than men

The sclerotherapy type segment accounted for the largest market share in 2020

The growth is credited to the high adoption of this treatment due to the advantages, such as no need for anesthesia, no scarring, simple follow-up treatments, and no need for hospital admission

The endovenous ablation segment is anticipated to witness the fastest CAGR over the forecast period as this treatment is preferred over conventional procedures, such as surgical stripping and ligation

The hospitals end-use segment held a major share of the market in 2020 owing to the well-established healthcare infrastructure in Canada

Product development, supply agreements with hospitals & clinics, and acquisitions are some of the strategic initiatives being undertaken by key market players to gain a higher market share
