## **Abstracts**

The Canadian human cadaveric tissue market size was valued at USD 129.50 million in 2025 and is anticipated to reach USD 212.74 million by 2033, expanding at a CAGR of 6.55% from 2026 to 2033. This growth is attributed to the rising number of orthopedic, spinal, and dental procedures requiring biological graft materials.

An aging population and the increasing prevalence of musculoskeletal disorders are further boosting demand for bone and soft-tissue reconstruction. Growing preference for biologic reconstruction over synthetic alternatives also supports market expansion. In addition, advancements in tissue processing and preservation technologies are enhancing graft safety and clinical outcomes, strengthening adoption across surgical applications.

The increasing number of surgical procedures in Canada is a major driver of the human cadaveric tissue market. Rising volumes of orthopedic, spinal, dental, and reconstructive surgeries are driving sustained demand for bone and soft-tissue grafts. Allografts are widely used to restore structural support, promote healing, and reduce donor-site complications associated with autografts. As surgical capacity expands and waits times are addressed, utilization of cadaveric tissue products continues to grow.
