## **Abstracts**

The global cancer cachexia market size was estimated at USD 2.54 billion in 2024 and is projected to reach USD 3.90 billion by 2033, growing at a CAGR of 4.86% from 2025 to 2033. The rising cancer incidence and more patients with cachexia, and growing recognition of cachexia's clinical & economic impact, drive the market.

According to a report published by NIH in November 2023, Cancer-related cachexia affects up to 74% of cancer patients. It is directly responsible for 20-30% of cancer deaths, making it the main cause of death in 22-30% of cases. The increasing focus on supportive care in oncology is also driving market growth. However, increasing healthcare spending and improving access to cancer care in emerging markets are helping expand the potential customer base. As more patients receive cancer diagnoses and treatment worldwide, the need for cachexia management grows, which is expected to drive the growth of the cancer cachexia industry.
