### **Catheter Market Growth & Trends**

The global catheter market size is anticipated to reach USD 85.2 billion by 2030, according to a new report by Grand View Research, Inc. The market is expected to expand at a CAGR of 6.5% from 2022 to 2030. An increasing number of surgeries due to a rise in the number of chronic ailments such as diabetes, cardiovascular disorders, urological disorders, end-stage renal diseases, and other chronic conditions is expected to increase the adoption rate of catheters, thus driving the market over the forecast period.

COVID-19 is expected to have a positive impact on the market. According to National Center for Biotechnology Information (NCBI) in 2020, during the early stages of the COVID-19 pandemic, the use of both indwelling urinary catheters and Central Venous Catheters (CVC) increased, which is projected to boost market growth. Moreover, several manufacturers offering products such as coated urine catheters with temperature monitoring to ICU patients as a stronger protection against secondary infections, which is expected to boost market growth in the coming years.

Furthermore, technological advancements plays crucial role in fueling the market growth. For instance, miniaturized catheters and introduction of antimicrobial catheters

to reduce catheter-associated infections are expected to favor the catheter market growth. MAHURKAR Chronic Carbothane catheter, developed by Medtronic, is made of Carbothane, which facilitates a simple single-insertion technique and ensures superior kink resistance. The catheter delivers high flow rates with low arterial and venous pressures.
