Summary

The global cell freezing media market size was estimated at USD 1.23 billion in 2025 and is projected to reach USD 2.37 billion by 2033, growing at a CAGR of 9.0% from 2026 to 2033. The market's growth can be attributed to increasing adoption of cell freezing media as an alternative to in-house freezing preparations and the benefits of ready-to-use cryo-preserved media over conventional freezing techniques.

Moreover, rising demand for effective freezing media across a wide range of end-users and various new products launched by key market players are anticipated to fuel market growth.
