Chilled Beam System Market Size & Trends

The global chilled beam system market size was estimated at USD 365.4 million in 2023 and is projected to grow at a CAGR of 7.5% from 2024 to 2030. The market is primarily driven by increasing demand for energy-efficient cooling solutions in commercial buildings. As energy costs rise and there is an increased focus on reducing carbon emissions, both commercial and residential constructions are integrating systems that offer energy efficiency advantages. Chilled beam systems, which use less energy than traditional air conditioning systems by relying on water for heating and cooling, align perfectly with this trend.

A chilled beam system is a type of heating, ventilation, and air conditioning (HVAC) technology used to heat and cool large buildings. It's a water-based system that relies on the principle of convection to regulate the temperature within indoor spaces. Many organizations are moving toward greener, more sustainable building practices. Chilled beam systems, being more energy-efficient and using water as a transfer medium, align well with these sustainability goals.

The rising demand for improved indoor air quality (IAQ) and thermal comfort in buildings. Chilled beam systems provide superior air quality as they do not

recirculate air, thus lowering the risk of spreading airborne contaminants. This aspect has become particularly pertinent in the wake of global health concerns, notably the COVID-19 pandemic, which has amplified focus on IAQ in public buildings, offices, and healthcare facilities.
