Clinical Trials Matching Software Market Growth & Trends

The global clinical trials matching software market size is expected to reach USD 396.1 million by 2030, based on a new report by Grand View Research, Inc. It is expected to expand at a CAGR of 13.8% from 2022 to 2030. The significant increase in the number of ongoing clinical trials is likely to drive the market. In addition, the growing adoption of the clinical trial matching software catering to the clinical trials, along with the increased demand for virtual trials and automation in the healthcare sector are some of the key factors contributing to the market growth. The matching software help in effective and fast patient matching with patient-centric approaches.

In clinical trials, patient recruitment or matching can be time-consuming, and finding the right match can be a hurdle. Screening or locating prospective respondents who are qualified, considering all elements of the trials, verifying awareness, and getting informed consent to participate are the factors taken into consideration while recruiting patients. Enlisting the individuals in accordance with the qualifying requirements is crucial, hence the trial matching technology has been proved to be useful, especially in the COVID-19 scenario.

The software helps not only to find the right match but also saves the R&D-related costs, enabling smoother operations without human intervention. The software

providers are introducing new innovative techniques to strengthen their market position. For instance, in February 2022, the CTMA expanded CT-SCOUT technology offering in rheumatology.

Clinical Trials Matching Software Market Report Highlights

Based on deployment mode, the web and cloud based segment dominated the market in terms of revenue in 2021 and it is expected to register the fastest CAGR during the forecast period. The cloud computing models operate with no maintenance or upkeep charges and customers only have to pay for the services that are used. On the other hand, on-premises deployment involves in-house infrastructure, in-house IT support, working capital, and higher integration costs. Hence, web and cloud based models are preferred

Based on end use, pharmaceuticals and biotechnology companies captured the largest revenue share in 2021 owing to the higher adoption of software during ongoing clinical studies for cost-saving in the R&D activities

The CROs end-use segment is anticipated to expand at the fastest CAGR of 13.7% during the forecast period. CROs provide the professional assistance, expertise, and execution experience required for clinical trials quickly, without the need for the sponsor to engage such people full-time. CROs are preferred for outsourcing as their services are cost and time-effective

In 2021, North America led the market in terms of revenue owing to the rising adoption of the clinical trial matching software by the pharma, biotech, and medical companies in the region

Asia Pacific is anticipated to register the fastest growth rate over the forecast period due to the availability of a large patient pool supporting easy recruitment of patients/candidates
