## **Abstracts**

The global cold heading quality wire market size was valued at USD 16.6 billion in 2025 and is projected to grow from USD 17.4 billion in 2026 to USD 24.2 billion by 2033, at a CAGR of 4.9% from 2026 to 2033. Asia Pacific dominated the market, accounting for a revenue share of 52.1% in 2025. Cold heading quality wire is a high-quality steel wire specifically manufactured for cold heading and cold forming applications, where the material undergoes substantial deformation at room temperature to produce fasteners, bolts, screws, rivets, and other precision components.

Cold heading quality (CHQ) wire offers high strength, ductility, dimensional consistency, and excellent formability, making it suitable for manufacturing bolts, screws, nuts, rivets, and other precision components. Increasing vehicle production, expansion of industrial machinery manufacturing, and the growing use of lightweight, durable components are driving wire consumption. The automotive sector remains particularly important because cold-heading wire is widely used in safety-critical and structural fastening applications. The growing adoption of electric vehicles is also creating demand for specialized fasteners used in battery packs, thermal management systems, and electrical assemblies.

Expansion in residential and commercial construction, transportation infrastructure, machinery, and industrial facilities is increasing demand for durable fastening systems,

thereby supporting consumption of cold-heading-quality wire. Asia Pacific is expected to remain a major growth region due to its strong automotive, construction, steel, and manufacturing base, particularly in China and India.
