Abstracts

The global compound feed market size was valued at USD 567.0 billion in 2025 and is projected to grow from USD 592.5 billion in 2026 to USD 806.3 billion by 2033, at a CAGR of 4.5% from 2026 to 2033. Asia Pacific dominated the market, accounting for the largest revenue share of 39.1% in 2025. Market growth is supported by the continued expansion of commercial livestock and poultry production, which is increasing demand for nutritionally balanced and consistently manufactured feed.

Poultry remains a major source of feed demand, while aquaculture and other intensive production systems are also strengthening feed requirements. Industry data show that poultry feed has remained comparatively resilient even amid animal-health and economic pressures. The market also presents opportunities through improvements in feed efficiency and formulation innovation.

Manufacturers are increasingly focusing on optimized nutrient delivery, improved feed utilization, and the incorporation of alternative raw materials. The growing emphasis on feed circularity and better utilization of secondary resources creates additional scope for differentiated formulations and more resource-efficient feed production.

Global Compound Feed Market Report Segmentation

This report forecasts volume & revenue growth at regional and country levels and provides an analysis of the latest industry trends in each of the sub-segments from 2021
