Connected Health And Wellness Solutions Market Growth & Trends

The global connected health and wellness solutions market size is expected to reach USD 187.10 billion by 2030, according to a new report by Grand View Research, Inc. The market is expected to expand at a CAGR of 20.6% from 2022 to 2030. The demand for wearable medical devices and remote patient monitoring systems is anticipated to increase over the forecast period due to the shifting consumer preferences towards a healthier lifestyle thus driving the market growth. In addition, the increasing incidences of lifestyle-associated diseases requiring continuous health monitoring are expected to lead to an upsurge in the demand for connected health devices over the forecast period.

Moreover, the advantages associated with its usage and the availability of advanced products, such as remote sensors, adapters, and connected mobile communication devices are the factors further augmenting the market growth. The implementation of connected health technology is growing at an astonishing rate, propelled in part by consumer demand, innovations in wearables and medical devices, and the current healthcare climate in the post-COVID-19 era. In August 2020, Validic, a provider of health data platforms and solutions for scaling remote patient monitoring, released the main update to 'Validic impact', its remote patient monitoring solution. This innovative standalone form of Validic Impact needs no EHR integration and can be used as an

entirely standalone solution.

In addition, the corporation introduced a COVID-19 rapid response solution that allowed clinicians and HR administrators to register thousands of individuals using self-reported data and alerts to monitor COVID-19 symptoms. Consequently, the COVID-19 has given a push for businesses to quicken the adoption of these services. Moreover, the rising demand for greater access to patient health information is the key factor contributing to the market growth. Furthermore, the increased awareness levels as a result of the supportive initiatives undertaken by government and non-profit organizations, such as the Healthcare Information and Management Systems Society (HIMSS), are anticipated to serve this industry with future growth opportunities.

The rising emphasis on the development of advanced healthcare solutions coupled with the sufficient availability of funds is expected to boost the R&D investments in the connected health & wellness devices market. For instance, the government organizations, such as Healthcare Research and Quality (AHRQ), offer funds to expand the health information systems in the U.S., which is expected to further fuel the industry growth in this region.
