Abstracts

The global continuous threat exposure management market size was estimated at USD 2.70 billion in 2025 and is projected to reach USD 7.00 billion by 2033, growing at a CAGR of 12.7% from 2026 to 2033. Continuous Threat Exposure Management (CTEM) is an emerging cybersecurity approach that focuses on continuously identifying, assessing, prioritizing, and mitigating an organization's exposure to potential threats across its digital environment.

Unlike traditional security models that rely heavily on periodic assessments or reactive controls, CTEM emphasizes an ongoing, risk-based process that aligns security efforts with real-world attack paths. It integrates capabilities such as asset discovery, vulnerability management, threat intelligence, and validation into a unified framework, enabling organizations to gain a clearer view of their actual exposure rather than just theoretical risks. This approach helps security teams move beyond isolated toolsets and adopt a more holistic, business-aligned view of cyber risk.

A key aspect of CTEM is its focus on prioritization and actionable insights. Modern enterprises operate in highly complex IT environments that include cloud infrastructure, on-premises systems, third-party integrations, and remote endpoints. As a result, the volume of vulnerabilities and alerts can be overwhelming. CTEM addresses this challenge by correlating vulnerabilities with threat intelligence and potential attack

paths, enabling organizations to focus on the exposures most likely to be exploited and with the greatest business impact. By continuously validating security controls through techniques such as automated penetration testing and breach simulation, CTEM also ensures that defenses are not only in place but are functioning effectively under real-world conditions.

This growing need for integrated and continuous exposure management solutions is driving innovation across the cybersecurity market. For instance, in November 2024, Outpost24 introduced an integrated exposure management platform aligned with the Continuous Threat Exposure Management (CTEM) approach. It enables organizations to continuously monitor attack surfaces, prioritize risks beyond standard scoring, and automate remediation workflows. New features, including solution packages and automated scan workflows, help streamline security operations and reduce overall business risk. Such developments highlight the growing industry shift toward unified platforms that combine visibility, prioritization, and remediation. They also demonstrate how organizations are moving from reactive vulnerability management to continuous, risk-based exposure management strategies.
