Corn Fiber Market Growth & Trends

The global corn fiber market size is expected to reach USD 1.2 billion by 2027 registering a CAGR of 6.3%, according to a new report by Grand View Research Inc. Increasing utilization of corn fibers in pharmaceutical products is likely to drive the demand in the coming period. The high nutritional content and medicinal benefits of these fibers are anticipated to boost their demand further. These fibers are produced through enzymatic hydrolysis of corn starch and are rich in carbohydrates.

These are generally used to enhance the fiber contents in food and pharmaceutical products. Rising awareness about following a healthy lifestyle and resultant consumption of nutritional & high-quality food products are expected to boost the demand further. North America accounted for the largest market share in 2019 on account of large-scale production and consumption of corn in the region.

Growing food & beverages and pharmaceutical sectors in U.S. and Canada are also projected to ascend the product demand. Moreover, technological innovations in the textile industry are likely to provide growth opportunities to the market. Leading corn-producing economies are focusing on capacity expansion. Prominent companies in the industry are investing in R&D to introduce corn fibers to various applications in food & beverages.
