Abstracts

The global covered stent market size was estimated at USD 1.4 billion in 2025 and is projected to reach USD 2.1 billion by 2033, growing at a CAGR of 4.6% from 2026 to 2033. The growth is driven by the increasing prevalence of peripheral artery disease and complex aortoiliac occlusive conditions, rising volumes of endovascular procedures, and expanding preference for minimally invasive revascularization.

Advancements in covered stent design, including enhanced deliverability, radial strength, and long-term patency performance, continue to support broader clinical adoption. The key drivers of the market are the rising prevalence of peripheral artery and aortoiliac occlusive diseases, technological advancements in covered stent design and materials, increasing adoption of minimally invasive endovascular procedures and increasing adaptation of minimally invasive endovascular procedures.
