## **Abstracts**

The global data center asset management market size was estimated at USD 2.51 billion in 2025 and is projected to reach USD 6.17 billion by 2033, growing at a CAGR of 12.2% from 2026 to 2033, driven by the rapid expansion of digital infrastructure and the increasing complexity of managing large-scale data center environments. Hyperscale and colocation providers are scaling facilities to meet rising demand from cloud computing, AI workloads, and digital services.

For instance, in March 2026, Hyperscale Data Inc., through its subsidiary Alliance Cloud Services, expanded its footprint in southwest Michigan, U.S., with the acquisition of approximately 48.5 acres of additional land. As of early 2025, the company's data center at the site operated with around 28MW of IT capacity; however, in February 2025, Hyperscale announced plans to scale the facility up to 340MW to support growing demand for high-performance computing.

The growing need for operational efficiency and cost optimization also drives the growth of the data center asset management industry. Data centers operate in highly cost-sensitive environments where downtime, underutilized assets, and inefficient capacity planning directly impact profitability. DCAM solutions enable real-time asset visibility, predictive maintenance, and automated inventory management, helping operators reduce capital expenditures (CapEx) and operational expenditures (OpEx) while

improving uptime and service reliability.

The rising adoption of hybrid and multi-cloud architectures is also accelerating demand for asset management solutions. Enterprises are distributing workloads across on-premises data centers, colocation facilities, and multiple cloud platforms, creating fragmented infrastructure environments. DCAM tools provide centralized monitoring, asset tracking, and integration capabilities across these heterogeneous environments, ensuring better governance, compliance, and resource allocation.
