Abstracts

The global data center maintenance and support services market size was estimated at USD 7.39 billion in 2025 and is projected to reach USD 15.77 billion by 2033, growing at a CAGR of 10.0% from 2026 to 2033 due to the rapid expansion of digital infrastructure across enterprises and hyperscale operators. As organizations accelerate cloud adoption, edge computing deployments, and hybrid IT architectures, the installed base of servers, storage systems, networking equipment, and power & cooling infrastructure continues to expand.

This growing asset footprint directly increases the demand for preventive maintenance, corrective support, spare parts management, and lifecycle services to ensure uptime and performance optimization. With digital transformation initiatives becoming mission-critical, enterprises are prioritizing service-level agreements (SLAs) and proactive infrastructure monitoring to minimize downtime risks.

In addition, the increasing complexity of data center environments contributes to the industry. Modern facilities integrate multi-vendor hardware, virtualization layers, software-defined networking (SDN), AI workloads, and high-density computing environments such as GPU clusters. This technical heterogeneity necessitates specialized third-party maintenance (TPM) providers and OEM support services capable of handling cross-platform interoperability, firmware management, and

advanced diagnostics. Moreover, the migration toward modular and edge data centers requires geographically distributed service networks, further boosting demand for localized technical support and rapid-response maintenance contracts.

The rising emphasis on uptime reliability and regulatory compliance is also accelerating service adoption. Industries such as BFSI, healthcare, government, and telecommunications operate under strict data protection, availability, and disaster recovery mandates. Unplanned downtime can result in significant financial losses, reputational damage, and regulatory penalties. According to the ITsec Bureau reports, API downtime in the global finance sector rose 60% between Q1 2024 and Q1 2025, while average uptime slipped from 99.66% to 99.46%. Weekly disruptions increased from about 34 minutes in Q1 2024 to significantly higher levels in Q1 2025, intensifying operational challenges for financial institutions. As a result, enterprises are increasingly investing in predictive maintenance, remote infrastructure monitoring, and AI-enabled fault detection systems integrated into support service contracts. This shift from reactive to proactive maintenance models enhances operational resilience and drives recurring service revenues.
