Dengue Vaccine Market Summary

The global dengue vaccine market size was estimated at USD 423.18 million in 2024 and is projected to reach USD 1,618.61 million by 2033, growing at a CAGR of 13.73% from 2025 to 2033. The increasing prevalence of dengue fever across tropical and subtropical regions drives strong demand for effective vaccines.

The increasing urbanization and population density create favorable conditions for Aedes mosquitoes, the primary carriers of the virus. The increasing frequency of outbreaks highlights urgent preventive needs, as seen in April 2025, when the World Health Organization reported Brazil had registered 1,010,833 probable cases, 668 confirmed deaths, and 724 under investigation, with S?o Paulo leading at 585,902 cases. The incidence rate was 475.5 per 100,000, lower than 1,881 per 100,000 in 2024. The increasing awareness among healthcare providers and patients, combined with advances in research, greater accessibility in clinics, and stronger pharmaceutical collaborations, accelerates vaccine adoption and supports global dengue control efforts.

In July 2025, KFF Health News reported a sharp rise in dengue cases across the contiguous United States. The number of new infections reached approximately 3,700, nearly doubling from about 2,050 cases in 2023. Of these, 105 cases were confirmed to be locally transmitted in California, Florida, and Texas, signaling a concerning trend in domestic spread. Historically, dengue infections in the U.S. were mostly travel-related,

but the rising local transmission indicates that the *Aedes aegypti* mosquito has expanded its presence. This surge reflects changing environmental conditions and highlights growing risks for communities that previously faced minimal exposure to dengue. The sudden escalation of cases underscores an urgent need for preventive strategies, including vaccination, mosquito control, and improved monitoring.
