Dental Articulators Market Growth & Trends

The global dental articulators market size is expected to reach USD 194.7 million by 2028, according to a new report by Grand View Research, Inc. It is expected to expand at a CAGR of 6.1% from 2021 to 2028. The growth is attributed to developed technology in dental articulation procedures. Moreover, an increasing number of oral health disorders is expected to contribute to the growth of the market.

A rise in awareness regarding various benefits of orthodontics treatment along with product modifications ensuring better efficiency and performance will support the market growth in the future. Demand for dental articulators is anticipated to boost during the forecast period due to accuracy in orthodontic appliances, fixed prosthodontic restorations (onlays, inlays, bridges, crowns, and implant), and accurate fabrication of the biting surfaces of the removable prosthodontic appliances. In addition, the availability of skilled and dental professionals that can help lower the risk of complications such as the transmission of coronavirus during dental procedures is among few factors anticipated to drive the market. The COVID-19 pandemic negatively affected the market for dental articulator.

The novel coronavirus outbreak that occurred in 2020 attracted global attention and

bloomed into the COVID-19 pandemic. To limit the spread of transmission of the virus, regulatory bodies, governments, and health authorities around the world strongly shut down dental schools, medical schools, and educational institutions. In addition, to slow down the spread of COVID-19 at both community and national levels, various factors are being implemented such as social distancing, quarantine, contact tracing, and COVID-19 testing. The adverse effect of COVID-19 on dental schools has been tremendously affecting the market for dental articulators.
