Dental Burs Market Growth & Trends

The global dental burs market size is expected to reach USD 881.6 million by 2030, according to a new report by Grand View Research, Inc. The market is expected to expand at a CAGR of 5.4% from 2022 to 2030. The increasing prevalence of dental diseases such as dental caries is anticipated to drive market growth. Furthermore, the rise in the geriatric population and their need for accessible oral care is anticipated to further drive the market. Dental burs are essential dental rotary instruments that are utilized in dentin removal, cavity preparation, cutting hard tissues, implantology, etc., and are commonly made of stainless steel, tungsten carbide, and diamond grit.

Dental caries is the most prevalent and preventable dental condition, which if identified early, can be treated by non-invasive techniques. According to WHO, as of 2020, around 3.5 billion people suffer oral diseases globally with untreated dental caries of permanent teeth being the most common dental disease and more than 530 million children suffer from caries of primary teeth. Factors like changing lifestyle, high sugar consumption, and less awareness about oral hygiene in low- and middle-income countries is the most common cause for the prevalence of caries.

Severe periodontal (gum) disease which is a major cause of tooth loss affects 10% of the global population. According to the American Dental Association, 85% of individuals

in the United States, value dental health and consider it as an essential aspect of overall care. The awareness and importance of oral health combined with better access to advanced dental services will help in the growth of the dental equipment market. In the light of COVID-19, the market was affected as the footfall of patient appointments for dental treatments was temporarily suspended due to the high risk of transmission. However, the market is recovering and companies like Dentsply Sirona reported an increase in sales of their technologies and equipment segment in 2021. Moreover, many dentists believe that there will be a surge in oral care and dental treatment post-Covid-19 crisis and this is expected to propel market growth.
