### **Dental Consumables Market Growth & Trends**

The global dental consumables market size is expected to reach USD 57.7 billion by 2030, based on a new report by Grandview Research, Inc. The market is anticipated to expand at a CAGR of 7.9% from 2022 to 2030. Factors such as increasing demand for cosmetic dental procedures, increased implant usage, growing dental tourism, an aging population, and global economic expansion are driving the market growth. Dental treatments are considered crucial in medical tourism as people travel to other areas and nations for surgeries that are either too costly or unavailable in their native country. In addition, dental specialists keep competing for their business. A wide range of treatment alternatives provided by professionals and cosmetic dentistry has experienced a huge increase in demand for dental consumables over the years.

Emerging economies are also contributing to the growth of the dental industry. Rising income levels are likely to drive the premium category of dental consumables to perform better in developing markets. Simplicity, convenience, and standardization of treatment regimens in industrialized countries, on the other hand, will save chair time and promote market expansion.

The COVID-19 pandemic massively impacted the dental care industry in the initial

phase. Many countries were put under lockdown, suspending trade with other nations & imposing travel restrictions, resulting in a drop in the healthcare industry's progress, particularly dental care. The dental practices were not allowed to operate within the social distance guidelines imposed by the governments. Only emergency cases were allowed. According to the ADA, non-emergency dental procedures were postponed. However, the market has been recovering at a steady speed.
