Dental Equipment Market Growth & Trends

The global dental equipment market size is expected to reach USD 17.06 billion by 2030, according to a new report by Grand View Research, Inc., registering a CAGR of 6.2% over the forecast period. These tools help with an oral health diagnosis, care, and maintenance and allow practitioners to plan a precise course of action. The introduction of supportive government efforts for oral health, an increase in medical tourism for dental operations, and the incidence of dental problems all contribute to the industry's growth. In addition, manufacturers like Planmeca are always introducing fresh computer-aided technology to the market.

For instance, the industry demand is being driven by the company's March 2019 launch of the Planmeca Creo C5, an innovative 3D printer created to deliver chairside CAD/CAM dentistry and restorative dental treatments in a single visit. According to the estimates published by the United Nations in 2019, there were 703 million people aged over 65 years globally, and the number of older individuals is projected to double to 1.5 billion by 2050. The rising prevalence of various oral conditions in the geriatric population is likely to increase the demand for preventive, restorative, and surgical services in the future. According to the American Dental Association, 85% of individuals in the United States, value dental health and consider it an essential aspect of overall

care.

The realization of the importance and maintenance of oral health combined with better access to advanced dental services will help in the growth of the industry. However, the “emergency-only” mode of dental care delivery due to the COVID-19 pandemic had a rippling effect and the industry witnessed an imminent increase in availing cost of dental care. According to the Journal of Contemporary Dental Practice, dental services were among the last to relaunch in post-pandemic relaxations since dental procedures are at high risk of transmission. This resulted in serious financial problems and revenue loss for the overall dental market.

Dental Equipment Market Report Highlights

Dental systems and parts emerged as the largest product segment in 2022 as these equipment are used for digital imaging and diagnosis of dental ailments

The dental lasers segment is expected to witness the highest CAGR during the forecast period. This is owing to its increasing application in surgical and teeth-whitening procedures.

North America dominated the global industry in 2022 owing to the high demand for new technologies & the prevalence of dental disorders and the presence of a large pool of key players & advanced healthcare infrastructure

Asia Pacific, on the other hand, is expected to register the highest CAGR over the forecast period
