### **Dental Matrix Systems Market Growth & Trends**

The global dental matrix systems market size is expected to reach USD 589.1 million by 2030, according to a new report by Grand View Research, Inc. It is expected to expand at a CAGR of 5.8% from 2022 to 2030. A dental matrix system is used for three things, recreating the interproximal contact and the natural tooth shape, sealing the gingival walls and proximal of the prep, and overcoming the thickness of the matrix band. Dental matrix systems are built to establish a temporary interproximal wall of a tooth surface for the restoration procedure.

Restorative dentistry is one of the growing markets in the healthcare domain across the world. The market is mostly driven by factors such as the growing dental restorative procedures, rising incidence of dental problems, and increased demand for cosmetic dentistry. Furthermore, rising dental tourism and the growing adoption of digital dentistry in emerging markets are anticipated to boost the market growth during the forecast period.

According to the National Institute of Dental Research, the most prevalent and common dental disease in both, adults and children is tooth decay. Nearly 92% of the population, between the ages of 20 to 64, have dental caries. The rising incidence of oral and dental problems is a major driver contributing to the growth of the market. With the

rising disposable incomes in developing economies, the willingness to afford expensive dental procedures has also increased among the population, specifically among the aging population.

Poor diet and sedentary lifestyle, especially amongst children, which leads to tooth decay, are driving the market. Furthermore, according to the American Dental Association (ADA), as of 2018, there are 199,486 dentists are working in the U.S. In addition, the Bureau of Labor Statistics mentions that dental cosmetic procedures are projected to increase by 19% from 2016 to 2026. This rising number of dental practitioners and clinics is also expected to contribute to the market growth.

The COVID-19 pandemic has significantly affected the market. Due to the lockdown and global restrictions being imposed in most of the countries initially, many dental treatments and procedures were halted. The COVID-19 pandemic has caused a significant disruption in the supply chain of the overall medical industry. The outbreak had resulted in a decrease in the number of dental procedures performed each year, resulting in an overall decline in the market.
