Dermatology Devices Market Growth & Trends

The global dermatology devices market size is expected to reach USD 34.3 billion by 2030, registering a CAGR of 11.9% over the forecast period, according to a new report by Grand View Research, Inc. Dermatology devices are expected to have a high demand due to rising beauty consciousness, increasing cases of skin diseases, and the growing influence of social media. The incidence of skin disorders, such as psoriasis, acne, eczema, and skin lesions, is continuously rising across the globe owing to irregular lifestyles and food habits. Melanoma is the deadliest form of skin cancer arising due to overexposure to the sun. Dermatology diagnostic devices help in the early diagnosis of melanoma.

The high prevalence of this skin condition is anticipated to contribute to market growth. For instance, in 2019, nearly 7,800 Canadians were estimated to be diagnosed with melanoma and nearly 1,300 Canadians were estimated to die due to melanoma. Obesity has become one of the major health concerns as well, for both the male and female populations. Hence, fat removal procedures are being highly adopted. Liposuction is considered an effective obesity treatment. A rise in disposable income levels is also another factor driving the product demand. In addition, technological advancements in laser treatments are increasing the application scope of these

devices, thus boosting the demand by physicians and patients alike.
