Abstracts

The global dialysis disinfectant market size was valued at USD 121.5 million in 2025 and is projected to grow from USD 128.6 million in 2026 to USD 194.1 million by 2033, at a CAGR of 6.0% from 2026 to 2033. North America dominated the market, accounting for a revenue share of 32.1% in 2025. The industry is driven by the continued use of hemodialysis services and the need to maintain hygienic conditions across dialysis facilities. Products support infection-control practices by reducing bacterial, viral, and biofilm contamination in dialysis water systems and reusable equipment.

The market includes disinfectants formulated for dialysis machines, water distribution systems, and related components, with product selection influenced by compatibility with equipment materials, required contact time, concentration, rinsing requirements, and the type of contamination being controlled.

The rising prevalence of End-stage Kidney Disease (ESKD) is supporting demand for dialysis disinfectants by expanding the population requiring kidney replacement therapy, particularly hemodialysis. Patients with ESKD who undergo hemodialysis require repeated treatment sessions, resulting in regular utilization of dialysis machines, dialysate delivery pathways, water-treatment units, and associated equipment. These systems require routine cleaning and disinfection to control microbial contamination and

maintain appropriate hygienic conditions during dialysis treatment. The expansion of the ESKD population also increases the operational workload of dialysis facilities, creating greater requirements for maintaining dialysis equipment and water distribution systems between treatment cycles.

In addition, repeated exposure of equipment and fluid pathways to water and dialysate can create conditions conducive to microbial contamination and biofilm formation if appropriate cleaning and disinfection procedures are not followed. Dialysis disinfectants, therefore, form an important part of routine infection-control and equipment-maintenance practices within dialysis facilities. As healthcare systems expand access to renal replacement therapy and more patients with advanced kidney disease receive ongoing dialysis care, the installed base and utilization of dialysis equipment continue to expand.

Increasing emphasis on dialysis-associated infection prevention is driving demand for dialysis disinfectants as healthcare providers strengthen procedures to control microbial contamination across dialysis equipment, water systems, and treatment environments. Hemodialysis involves repeated patient contact with dialysis machines, extracorporeal circuits, vascular access sites, and water-based treatment systems, creating multiple points where contamination control is required. Dialysis facilities, therefore, use routine cleaning and disinfection procedures to reduce the risk of contamination and maintain hygienic treatment conditions. Greater attention to infection-control practices also encourages facilities to follow structured disinfection protocols for dialysis machines, water-treatment units, distribution loops, and reusable components. This creates recurring consumption of disinfectant products rather than demand limited to equipment installation or replacement.

For instance, the CDC identifies bloodstream infections as a serious complication of dialysis and promotes proven Core Interventions to reduce them. In addition, CDC guidance published in 2025 for Candida auris specifically recommends thorough cleaning and disinfection of dialysis stations between patient treatments, demonstrating the direct role of disinfection in dialysis infection-control protocols.

Global Dialysis Disinfectant Market Report Segmentation.

This report forecasts revenue growth at the global, regional and country levels and provides an analysis of the latest industry trends & opportunities across each sub-segment from 2021 to 2033. For this study, Grand View Research has segmented the global dialysis disinfectant market report based on active ingredient, application, form,
