Abstracts

The global distributed energy resource management system market size was estimated at USD 780 million in 2025 and is projected to reach USD 2,756 million by 2033, growing at a CAGR of 16.7% from 2026 to 2033. Market growth is primarily driven by the rapid integration of distributed energy resources (DERs) such as solar PV, wind, battery energy storage systems (BESS), electric vehicles, and demand response assets into power grids.

Utilities and grid operators are increasingly adopting DERMS solutions to manage grid complexity, enhance grid flexibility, and maintain reliability amid rising renewable energy penetration. In addition, growing concerns around grid congestion, voltage instability, and intermittency of renewable generation are accelerating the deployment of advanced DERMS platforms. These systems enable real-time monitoring, forecasting, optimization, and control of distributed assets across transmission and distribution networks. Technological advancements such as AI-based analytics, cloud-based platforms, advanced forecasting algorithms, and integration with ADMS, SCADA, and EMS are further enhancing DERMS capabilities.

The market is also gaining momentum due to supportive government policies, decarbonization targets, and utility investments in smart grid infrastructure. Increasing focus on cost optimization, grid resilience, cybersecurity, and automation, along with the

growing need to support virtual power plants (VPPs), microgrids, and transactive energy models, is expected to sustain steady market expansion over the forecast period.
