Abstracts

The global edible coatings market size was estimated at USD 2,156.34 million in 2024 and is projected to reach USD 3811.80 million by 2033, growing at a CAGR of 6.7% from 2025 to 2033. The edible coatings industry is experiencing significant growth driven by rising consumer demand for fresh, chemical-free, and longer-lasting food products.

Increasing regulatory focus on food safety and waste reduction is accelerating the adoption of natural, plant-based coatings that preserve freshness and extend shelf life across various perishable categories. These sustainable solutions enable manufacturers to meet clean-label expectations, enhance product quality, and align with corporate sustainability objectives, thereby strengthening brand value and market competitiveness.

The market is witnessing accelerating growth as the food industry seeks sustainable solutions to reduce post-harvest losses and extend shelf life without relying on synthetic packaging. Growing global concerns over food waste, coupled with regulatory emphasis on natural and biodegradable preservation technologies, driving adoption across fruits, vegetables, meat, and dairy segments. Authorities such as the U.S. FDA and EFSA have endorsed the use of safe, food-grade Products like polysaccharides, proteins, and lipids for edible coatings, further strengthening market credibility. Rising consumer awareness and preference for clean-label, chemical-free products are significantly driving the demand for edible coatings. These coatings align with the growing “green

packaging” and “zero-waste” initiatives adopted by manufacturers and retailers to promote sustainability and reduce environmental impact.
