## **Abstracts**

The global electric heating radiators market size was estimated at USD 1,960.6 million in 2024 and is projected to reach USD 2,719.4 million by 2033, growing at a CAGR of 3.5% from 2025 to 2033. The industry is driven by rising demand for efficient space-heating solutions across residential, commercial, and industrial facilities.

Growth in urban housing, renovation activity, and cold-climate construction continues to strengthen the need for compact, reliable, and easy-to-install heating systems. Electric heating radiators are also gaining popularity due to their ability to deliver targeted room-level heating without the need for extensive ducting or infrastructure. The expanding commercial and institutional sectors, particularly offices, hospitality, and healthcare, add to market momentum. Consistent investments in retrofitting, improved building insulation, and refurbishment of older heating systems create sustained demand. Growth in cold-region industrial facilities and temporary or modular heating needs also contributes to steady uptake of electric heating radiators.
