### **Electrodeionization Market Size & Trends**

The global electrodeionization market size was estimated at USD 1,094.1 million in 2023 and is projected to reach USD 1,764.1 million by 2030 and is anticipated to grow at a compounded annual growth rate (CAGR) of 7.0% from 2024 to 2030. The increasing demand for ultrapure water in various industries, such as power generation, pharmaceuticals, and electronics, is driving the growth of the electrodeionization (EDI) market.

EDI technology is favored for its ability to produce high-purity water without the need for chemical regeneration, making it an environmentally friendly and cost-effective solution. The demand for EDI systems is further fueled by stringent regulatory standards regarding water quality and the growing emphasis on sustainable and efficient water treatment solutions. Advancements in EDI technology and the integration of renewable energy sources are expected to further propel market growth.

Electrodeionization systems are essential for providing the high-purity water required in various industrial processes. These systems are widely used in power generation plants

to produce boiler feed water, in the pharmaceutical industry to produce water for injection, and in the electronics industry to manufacture semiconductors.

Electrodeionization technology combines the electrodialysis and ion exchange technologies that generates high-purity water with the help of electric energy and semi-permeable membranes. Manufacturers are investing in research and development activities in order to innovate new products with enhanced performance and energy-efficient technology. For instance, Ionpure, a division of Evoqua Water Technologies, continuously invests in the development of electrodeionization technology.
