Abstracts

The global electrotherapy market size was estimated at USD 1.38 billion in 2024 and is projected to reach USD 1.98 billion by 2033, growing at a CAGR of 4.12% from 2025 to 2033. The market is primarily driven by the rising prevalence of chronic pain, musculoskeletal disorders, and neurological conditions, which increase the demand for effective, non-invasive treatment options.

Technological advancements in portable and user-friendly devices, such as TENS and EMS units, have enhanced accessibility and improved patient compliance. The growing preference for drug-free and non-surgical pain management solutions is fueling market adoption.

An aging population, more prone to chronic ailments, further supports demand. Meanwhile, increasing awareness of physical therapy and rehabilitation, along with supportive healthcare initiatives and investments, is driving global market growth.

The growing prevalence of chronic diseases such as arthritis, diabetes, cardiovascular disorders, and chronic pain conditions is a major market driver. These long-term health issues often result in reduced mobility, muscle degeneration, and persistent pain, creating a strong demand for non-invasive and cost-effective therapeutic solutions. Electrotherapy modalities, including TENS, EMS, and NMES, are increasingly utilized to manage pain, improve muscle function, and enhance rehabilitation outcomes in patients with chronic conditions. The shift toward home-care and remote treatment options for

chronic disease management further accelerates the adoption of portable and user-friendly electrotherapy devices worldwide.
