Abstracts

The global evaporative coolers market size was estimated at USD 5,126.2 million in 2025 and is projected to reach USD 7,617.7 million by 2033, growing at a CAGR of 5.3% from 2026 to 2033. The evaporative coolers market is primarily driven by rising demand for energy-efficient and cost-effective cooling solutions, especially in regions experiencing high temperatures and increasing electricity costs.

Compared to conventional air conditioners, evaporative coolers consume significantly less power, making them an attractive option for residential and small commercial users.

Another key driver is the expanding application across industrial and commercial sectors, where large spaces require continuous ventilation and cooling at lower operational costs. Industries such as manufacturing, warehouses, and workshops prefer evaporative cooling systems due to their ability to provide fresh air circulation while maintaining energy efficiency. Technological advancements, including hybrid systems and improved cooling pad materials, are enhancing performance and broadening usability. Furthermore, the growth of e-commerce and organized retail is boosting online and offline distribution channels, making these products more accessible to a wider consumer base.
