Flat Panel Detector Based X-ray for Cone Beam Computed Tomography Market Growth & Trends

The global flat panel detector based x-ray for cone beam computed tomography market size is expected to reach USD 5.3 billion by 2030, according to a new report by Grand View Research, Inc. It is expected to expand at a CAGR of 7.3% from 2022 to 2030. Technological advancements, coupled with flat panel detector (FPD) technology's significant benefits over charge-coupled devices (CCDs) and image intensification detectors (IIDs), are expected to accelerate the use of FPD-based X-rays for cone beam computed tomography (CBCT).

FPD is an efficient technology owing to its low radiation exposure, increased picture accuracy, reduced image artifacts, quick scanning, and the ability to keep data records. The usage of FPD in CBCT has grown significantly from diagnostic imaging to image-guided surgery. The applications include dental, ENT, orthopedics, and others. The integration of CBCT and software for the successful diagnosis and treatment of a number of dental conditions has become possible due to technological improvements. Furthermore, the increased focus on research and development is expected to have a favorable impact on the adoption rate of medical imaging technologies beyond dentistry and ENT applications.

The market is moderately competitive owing to few players capturing a larger market share and a limited number of products in the market. VATECH and Asahi Roentgen are the companies that manufacture the highest variants of CBCT devices. Thus, many market players are taking different initiatives such as acquisition, funding, and product development in order to expand their product portfolio and enhance their manufacturing capacity.
