Abstracts

The global fluorspar market size was valued at USD 4.0 billion in 2025 and is projected to grow from USD 4.3 billion in 2026 to USD 6.1 billion by 2033, at a CAGR of 5.1% from 2026 to 2033. Asia Pacific dominated the market, accounting for a revenue share of 75.4% in 2025. The growth is primarily driven by increasing demand for hydrofluoric acid, which serves as a key raw material in the production of fluorochemicals, refrigerants, fluoropolymers, and specialty chemicals.

Expanding applications of hydrofluoric acid in the manufacturing of fluorinated compounds, including those used in refrigeration and air conditioning systems, are supporting market growth. The transition toward low global warming potential refrigerants is encouraging the development and adoption of alternative fluorochemical formulations, sustaining demand for fluorspar as an essential upstream mineral. In addition, growing demand for fluoropolymers in the automotive, electronics, chemical processing, and industrial equipment industries is strengthening consumption. The increasing use of high-performance materials in applications requiring chemical resistance, thermal stability, and durability is further contributing to the expansion of the market.

Increasing investments in infrastructure development, transportation networks, renewable energy installations, and industrial manufacturing are supporting demand for steel and aluminum, thereby creating additional opportunities for fluorspar suppliers.
