Summary

The global fragment analysis market size was estimated at USD 254.6 million in 2024 and is projected to reach USD 584.2 million by 2033, growing at a CAGR of 9.75% from 2025 to 2033. The market growth is primarily driven by factors such as increasing adoption of advanced analytical techniques, rising demand for high-precision molecular and protein analysis, expansion of research and development activities in the pharmaceutical and biotechnology sectors, and growing applications in genomics, proteomics, and diagnostics.

Advancements in Technology

Advancements in Technology have emerged as a major demand driver for the fragment analysis market, primarily due to continuous improvements in capillary electrophoresis (CE) platforms and assay chemistry. Higher resolution, quicker run times, enhanced sensitivity, and the ability to analyze multiple fragments simultaneously via sophisticated multiplexing are all features of new-generation CE instruments. These improvements significantly enhance laboratory workflow efficiency, enabling the detection of microsatellites, STRs, SNPs, and other genetic markers with greater accuracy.
