### Summary

The France milk protein market size was estimated at USD 620.3 million in 2024 and is projected to reach USD 1,062.1 million by 2033, growing at a CAGR of 6.2% from 2025 to 2033. Increasing health and nutrition awareness, changing dietary and lifestyle patterns, and rising demand for high-protein functional foods and beverages, especially among older adults, are driving the market.

Interest in infant and pediatric nutrition also drives the need for whey and casein proteins. Moreover, ongoing product innovation and diversification continue to strengthen market expansion. Increasing awareness of health and wellness serves as a key driver in the French milk protein market. Consumers focus on preventing chronic illness through balanced, protein-rich diets. Health-conscious individuals and fitness enthusiasts increasingly seek protein diets for weight management, muscle health and overall wellness. The growing demand for infant formulas and pediatric nutrition, essential for infant growth and development, further drives the milk protein.

With the aging population, there are concerns about muscle loss and age-related nutritional deficiencies. Older adults seek nutrition to maintain strength, mobility, and overall health. Milk protein, such as whey and casein, supports muscle maintenance,

provides nourishment, and enhances recovery, making milk protein an essential element in everyday food. Milk proteins are widely used in protein powders, bars, and beverages due to the rise in fitness culture. This shift is fueling innovation and product diversification within the milk protein market.
