Abstracts

The GCC protein ingredients market size was estimated at USD 771.1 million in 2024 and is projected to reach USD 1,120.5 million by 2033, growing at a CAGR of 4.3% from 2025 to 2033. This growth is driven by shifting consumer preferences and the increasing prevalence of sedentary lifestyle-related illnesses.

Furthermore, the rising interest in healthy living is boosting the demand for functional foods with essential protein ingredients and nutrients crucial for maintaining health. The demand for GCC protein ingredients is rising due to consumers' growing preference for plant-based products, which are perceived as healthier alternatives to animal-based options. This trend is expected to encourage protein ingredient manufacturers to develop various food products derived from soy and wheat, further boosting demand.

The market is expanding as more people become aware of health and wellness and participate in sports, fitness, and lifestyle activities. In addition, consumers are increasingly opting for products that are less processed, contain fewer artificial additives, are non-GMO, sustainably sourced, and halal certified. This shift is expected to enhance consumer preference for products containing certain ingredients. The growing popularity of these products among health-conscious individuals is anticipated to drive overall growth in the protein ingredients market.
